The author advises you to take full responsibility for your safety and to know your limits. Before practicing the skills described in this book, be sure that your equipment is well maintained and do not take risks beyond your level of experience, aptitude, training, and comfort level.

If you are like most people, you do not need six or seven days in the gym.

You need a program that develops multiple qualities of fitness without spending hours training every day.

That is exactly what I designed this template for.

WHO THIS IS FOR

This program is designed for the everyday athlete who wants to get stronger, build muscle, improve conditioning, and stay healthy for the long haul. You do not need to be a competitive athlete, nor do you need special equipment beyond a barbell, dumbbells, and a cardio option. You just need to show up four days per week and follow the plan.

Over four weekly sessions, you will build:

- ✓ Strength
- ✓ Muscle
- ✓ Aerobic fitness
- ✓ . Work capacity
- ✓ . Longevity

This is the foundation of the Functional Conjugate system.

Weekly Schedule

Monday — Full Body Strength A

Tuesday — Aerobic Conditioning

Thursday — Full Body Strength B

Friday — Aerobic Conditioning

Before Every Session — Warm-Up

Before every strength session, spend 5 to 10 minutes getting ready for the upcoming training session.

Here is an example of a quick & effective full-body warm-up

Full Body Warm-up

FULL BODY STRENGTH A

Coaches' Notes: Strength A is your lower-body dominant day. The front squat is your primary strength stimulus for the week. Everything after it supports the main lift and fills weak links. Focus on movement quality before load on every exercise.

Main Lift	<u>Front Squat</u> 5 x 5	Rest 2:00
Secondary Lift	<u>Glute Hip Thrust</u> 3 x 12-15	Rest 90s
Superset	<u>DB Press Variation</u> 3 x 10-12	Rest 60s between exercises
	<u>Row or Lat Pulldown Variation</u> 3 x 10-12	Rest 60s between exercises
Superset	<u>Triceps Pushdowns</u> 3 x 12-15	Rest 60s between exercises.
	<u>Hollow Rocks</u> 3 x 12-15	Rest 60s between exercises.

FULL BODY STRENGTH B

Coaches' Notes: Strength B is your upper-body dominant day. The heavy press is your primary strength stimulus. The pull work balances the pressing volume and protects your shoulders long term. Push the main lift. Keep the accessory work controlled and focused.

Main Lift	<u>Close Grip Bench Press or Floor Press</u> 5 x 5	Rest 2:00
Secondary Lift	<u>Pull-Up, Row or Lat Pulldown</u> 4 x 6-8	Rest 90s
Superset	<u>DB Split Squat</u> 3 x 8-10 each	Rest 60s between exercises
	<u>DB Biceps Curls</u> 3 x 8-10	Rest 60s between exercises
Superset	<u>Supported Single Leg RDL</u> 3 x 8-10 each	Rest 60s between exercises.
	<u>Farmer Carry</u> 3 x 100 ft	Rest 60s between exercises.

CONDITIONING

Conditioning Warm-up

One of the biggest mistakes people make is thinking conditioning and strength do not belong together.

Done correctly, aerobic work actually supports strength training by improving recovery, work capacity, cardiovascular health, and your ability to tolerate more training.

For this program, complete two Zone 2 aerobic sessions each week using 180 - your age is ideal heart rate.

Guidelines

30 to 60 minutes

(This is one case where more is better, so if you have time, go on the longer end).

Choose any modality:

- Incline walk
- Jog
- Bike
- Row
- Ski Erg
- Air Runner

Stay at a pace where you can comfortably hold a conversation but would rather not. If you are using heart rate, aim for approximately 70 to 80 percent of your maximum heart rate

Why Aerobic Training Matters

Aerobic training is not just about improving endurance. It increases your body's ability to produce energy. That means:

- ✓ Better recovery between sets
- ✓ Better recovery between workouts
- ✓ Increased work capacity
- ✓ Improved cardiovascular health
- ✓ Better metabolic health
- ✓ Greater longevity

The stronger your aerobic system becomes, the easier everything else gets.

Rep Guidelines

Heavy: 2 to 6 reps

Moderate: 8 to 10 reps

Light: 10 to 20 reps

Rest Periods

Main lifts: 2:00

Accessory work: 60 to 90 seconds

Progressive Overload

Progressive overload simply means doing a little more over time.

Add weight when the prescribed reps feel manageable. Add a rep before adding weight if you are not ready to go heavier. Do not change exercises until you have genuinely pushed the current ones as far as they will go.

That is it. That is the whole game.

The people who make the best long-term progress are not the ones who find the most creative exercises. They are the ones who show up consistently and find small ways to do a little more each week.

Reps in Reserve and Work Sets

Everything listed in this program is a work set. Take however many warm-up sets you need to find your working weight before your first work set. For the main lifts, you will likely need 2 to 4 warm-up sets ramping up in weight. For accessory exercises, 1 to 2 warm-up sets is usually enough. Warm-up sets do not count toward your total.

For your work sets, use reps in reserve as your guide to intensity.

Reps in reserve, or RIR, refers to how many reps you could still perform before reaching failure. Leaving 2 to 4 reps in reserve means the set is challenging but not a grind. You finish the set feeling like you had 2 to 4 more reps left in the tank if you needed them.

In the first few weeks of this program, aim for 2 to 4 RIR on all work sets. This allows you to learn the movements, find your working weights, and build consistency without accumulating excessive fatigue.

Over time, as you become more comfortable with the program and exercises, work toward 1-3 RIR. The sets get harder. The stimulus gets stronger. The results follow.

A simple way to think about it:

PHASE	REPS IN RESERVE	FEEL
Weeks 1-2	3-4 RIR	Challenging but comfortable
Weeks 3-4	2-3 RIR	Hard but in control
Weeks 5 and beyond	1-2 RIR	Very hard, one or two reps left

Avoid training to failure on the main compound lifts unless you're highly experienced and have done rep maxes for more than a few years. Save the hardest efforts for the accessory work where the consequences of a failed rep are lower and the movement patterns are simpler.

Nutrition

This program will only work as well as your recovery supports it.

You do not need a complicated nutrition plan, but you do need enough protein to support muscle growth and repair. Aim for at least 0.7 to 1 gram of protein per pound of bodyweight per day. Build your meals around whole foods, prioritize sleep, and do not overthink the rest.

Training is the stimulus. Nutrition and sleep are where the adaptation actually happens.

What to Do If You Miss a Session

Do not try to make it up by doubling up the next day. One missed session will not affect your results. Consistently trying to compensate for missed sessions will. Just get back on schedule and keep moving.

Final Thoughts

Do not overcomplicate your training or subscribe to the mindset that you have to do more to get better results.

Master the basics. Train all qualities of fitness. Apply progressive overload. Recover well. Stay consistent.

It is rarely the fancy exercises that produce the best results. It is consistently doing the right exercises, in the right order, for months, not days.

That is Functional Conjugate.

You Have the Foundation. Here Is What Comes Next.

This template gives you the foundation. But a template is not a program.

A program has built-in progression, weekly coaching notes that tell you exactly how to push each session, exercise demonstrations, and a community of athletes doing the work alongside you.

That is what All Access is.

Nine tracks of Functional Conjugate training for every goal, schedule, and equipment setup. Direct support from me and my coaching team. A founder's rate of \$39 per month for a full year for anyone who joins through this guide by using the code: **GUIDE39**

This is the same system I have used with over 1,000 athletes for more than two decades. The same system I am pursuing a PhD to study. And the most complete concurrent training platform available anywhere.

AFFILIATE LINKS

What equipment I use, supplements I take, and where to buy things.
Here is my current list with discount codes where available

TRAINING EQUIPMENT

Rogue Fitness — Barbells, racks, sleds, kettlebells, and everything else you need to run this program. The equipment I trust and use personally.
rogue.com

Torque Sled — My preferred sled for drag work. Built well and worth every penny.
Discount Code JBC5 for 5% off
torquefitness.com

SUPPLEMENTS

ATP Labs — The only supplement brand I recommend. Clean formulations, no junk, and the products actually work. I use their magnesium, omega-3, and protein regularly.

Discount Code JBC15 for 15% off
atplabs.com

Peptides: EllieMD

Discount Code: Jason Brown

FREQUENTLY ASKED QUESTIONS

HOW MANY DAYS PER WEEK?

With this sample block of programming you'll perform 4 sessions per week, but if you find you need to perform less sessions based on your own schedule, do so.

HOW LONG IS THE PROGRAM?

You can run this program for 4 weeks, increasing intensity each week as you get more comfortable with the movement patterns. Questions? Email us at
info@jasonbrowncoaching.com

HOW LONG ARE THE SESSIONS?

These sessions should only take 60-minutes to complete.
